

Award winning energy saving design

OUTLINE

R410A

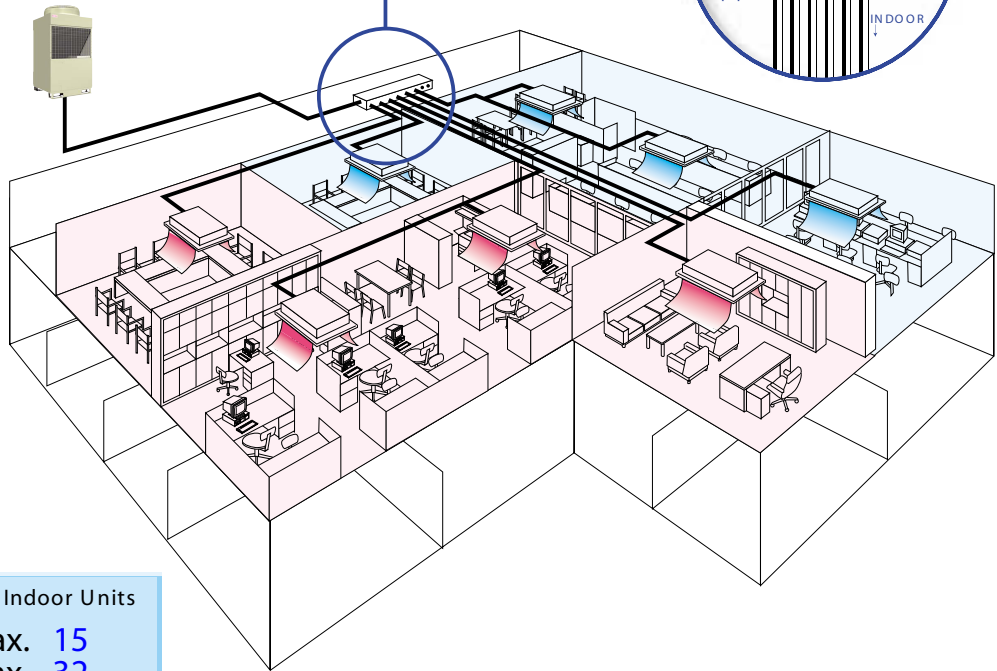

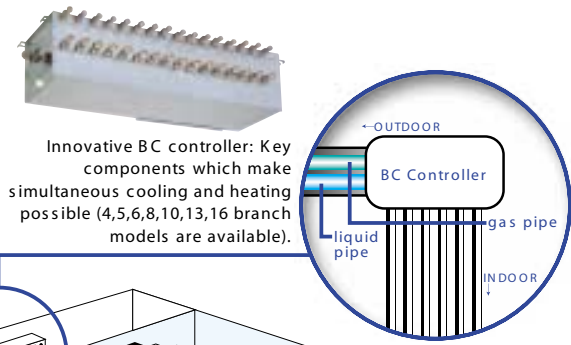

CITY MULTI R2-Series

The world's only simultaneous heating and cooling two pipe system.

The R2-Series is the perfect solution for applications which require simultaneous cooling and heating. The simultaneous operation is managed by the BC Controller which connects several indoor units to a single outdoor unit using two small pipes. The controller performs auto-switching of heating and cooling based on the set temperature for each indoor unit. The result is optimum comfort and control with the added benefits of energy efficiency and ease of installation.
